## DETAILED ACTION

### *Drawings*

1. The drawings are objected to under 37 CFR 1.83(a) because they fail to show reference number **29** as described in the specification, page 11, line 11. Any structural detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-22 are rejected under 35 U.S.C. 102(b) as being anticipated by Trokhan et al., US Patent No. 5,718,806.

Trokhan et al. teach a transfer system for a papermaking web including a vacuum device having a primary head, the vacuum shoe **100**, and a secondary head, the vacuum box **200**, downstream from the primary head **100**, see figures and column 7, lines 35-65. Note that Trokhan et al. teach the fluid communication of the show with the belts and web and teach the slots as claimed in the independent claims, see column 7, lines 35-65. Note that the vacuum system extends all the way through the cross-machine direction of the web/belt, which implies that the secondary vacuum box covers at least the edge(s) of

Art Unit: 1731

the system and therefore, falls within the claimed range, i.e., at least one edge of the running web. Trokhan et al. teach also the use of more than one vacuum box which defines over the other auxiliary head as claimed. As to the range of vacuum produced by the device(s), the device taught by the reference, Trokhan et al., is inherently capable of being used at such pressure/vacuum and therefore the claims are inherently anticipated by the reference.

*Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure in the art of "Vacuum transfer systems."
